Agent-Based Modeling of Pandemic Spread

20 x 20 grids, random walk

- **p**: S → I, infection prob
- **q**: I → R, recover prob

- **S**: Susceptible
- **I**: Infected
- **R**: Recovered

Limiting movements smoothes outbreak peaks?

— *Yes, especially for mobility (prob of stay);*

- *But susceptible avoidance is of marginal help;*
- *Limiting on infected and close-contacts is more effective.*
